Deal! for immoblienscout24

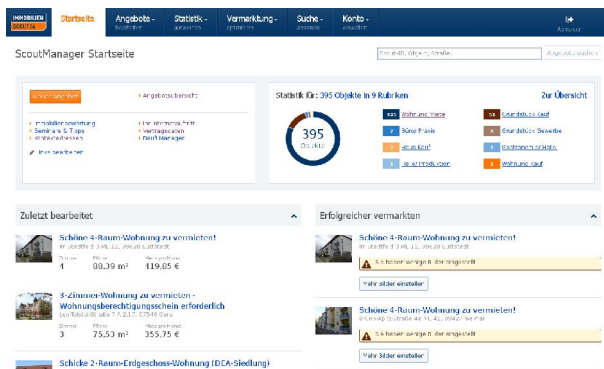

Illustration 5: Apartments for rent in the immo24 dashboard

Introduction

What does it do?

Deal! is a TYPO3 interface for the marketplaces

- ebay and
- immobilienscout24 (is24).

You can manage all items with TYPO3 and publish it on ebay or immobilienscout24 (is24).

Deal! for ebay

- publishes your items at the marketplace ebay
- updates your item on ebay automatically, if you update your item in the Quick Shop
- enables you to configure basic properties of your item for the marketplace ebay.

Deal! and Quick Shop – ebay ready-for-use

- Deal! is extending the TYPO3 Quick Shop with an interface for the marketplace ebay.
- Deal! enables you, to manage all your items with Quick Shop.

Deal! for immobilienscout24 (is24)

- publishes your items at the marketplace immobilienscout24¹
- items will updated by a cron job.

What does it not do?

Deal! isn't a web interface for managing items at ebay or at immobilienscout24 in principle.

- It doesn't substitute neither the ebay interface nor the immobilienscout24 interface.

Deal! isn't suited to manage items with complex specifications like

- complex calculated shipping costs
- cross selling
- variants

¹ This feature is limited for apartments for rent. It can extended for other real estate objects but PHP coding is needed.

Limitations

Synchronisation

Items are synchronised one way only – from DEAL! and Quick Shop respectively to ebay and immobilienscout.

- If you update your item in the Quick Shop, Deal! will update this item on ebay automatically.
- If you update a apartment for rent, a cron job of Deal! will update this item on immobilienscout24 depending on the cron job period.

Items aren't synchronised the way back – nor from ebay and neither from immobilienscout24 to TYPO3:

- If an item is sold in your Quick Shop, there isn't any effect to the marketplace ebay.
- If an item is sold on a marketplace, there isn't any effect to your Quick Shop.
- If you change the properties of an item in the marketplace like ebay, this hasn't any effect to the properties of the item in your Quick Shop

ebay

Marketplaces

Each ebay marketplace has different categories¹ and different shipping service costs.

Categories and shipping service costs are ready to use for:

- Germany - EBAY-DE/EUR (77)
- US - EBAY-US/USD (0)

See details at "Import the values for your marketplace" on page 34 below.

¹ Near by 20.000 records per marketplace

Requirements

ebay

You need ebay accounts. See "Requirements" on page 34 below.

immobilienscout24

You need immobilienscout24 accounts. See "Accounts" on page 36 below.

PHP

You need a PHP with a running Curl modul (php curl).

Quick Shop

If you like to use the Quick Shop, you need the extension Quick Shop¹.

TYPO3 Versions

Deal! is developed for and tested with

- TYPO3 6.1 and 6.2

Maybe it is running too in

- TYPO3 4.5, 4.6, 4.7

¹ See: <http://quick-shop.de/>. You can use Deal! for other shops too.

Deal! for ebay

Installation

Install and enable Deal!¹

Test it!

You can test Deal! immediately – without configuring the Extension Manager. See section "Test it!" on page 9 below.

Extension Manager

Configure Deal! with the Extension Manager.

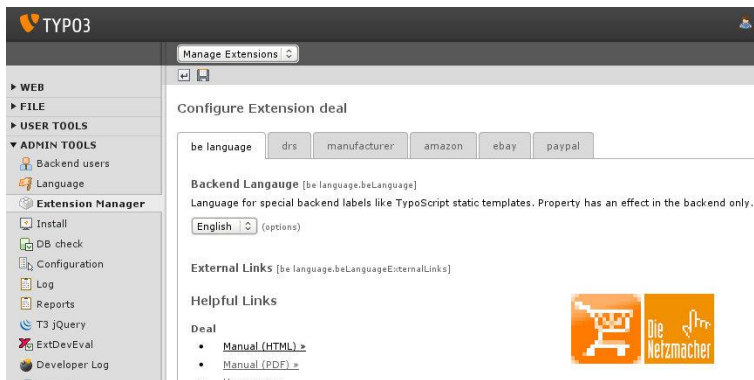

Illustration 6: Deal! extension manager

See details in the section "Extension Manager" on page 33 below.

Import values for your ebay marketplace

You are importing the needed values for your ebay marketplace supported by another Deal! Extension.

See details at "Import the values for your marketplace" on page 34 below.

Test it!

You can test Deal! immediately – without configuring the Extension Manager.

Page and plugins

Test Deal! and ebay with the developer plugins:

- Add a new page Deal!
- Add one of the both ebay plugins
 - Deal! [DEV] ebay 3 items
 - Deal! [DEV] ebay categories
- Add one of the both ebay Templates
 - Deal! [DEV] ebay 3 items
 - Deal! [DEV] ebay categories
- Configure the Templates with the TypoScript Constant Editor
 - [DEAL - DEV - EBAY 3 ITEMS]
 - [DEAL - DEV - EBAY CATEGORIES]

See details in the section "Plugins" on page 9 below.

Plugins

You don't need any ebay plugin for enable or update a Quick Shop item on an ebay marketplace.

¹ <http://typo3.org/extensions/repository/view/deal/>

Plugins are for testing and development only.

Deal! [DEV] ebay 3 items

Deal! [DEV] ebay 3 items for search with: TYPO3

TypoScript Constant Editor

- You configure the properties supported by TypoScript.
- See Constant Editor -> Category: [DEAL - EBAY DEV - GETTING STARTED]

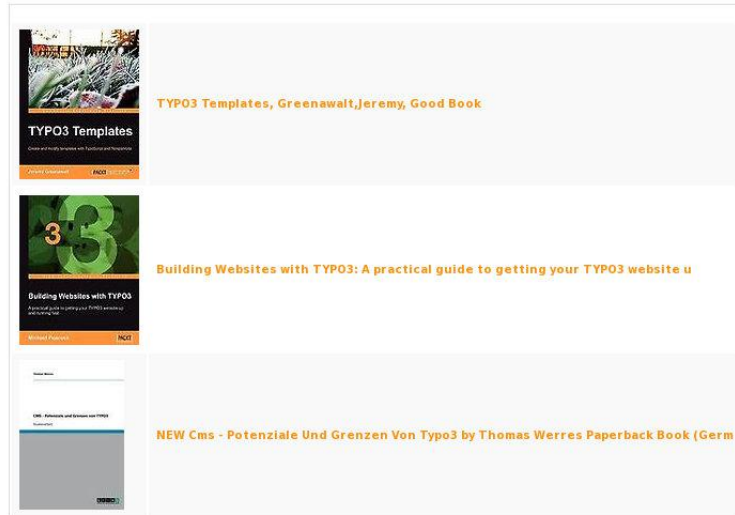

Illustration 7: Plugin Deal! ebay 3 items

Functionality

- These plugin displays 3 items from the ebay shop.
- It is a quick and easy way to check, if you can use the ebay shop within TYPO3 in principle.

Properties

- Search word for the items (like TYPO3)
- Maximum amount for the items price
- ebay shop (like EBAY-DE or EBAY-US)
- currency (like EUR or USD)

TypoScript Constant Editor

- You configure the properties supported by TypoScript.
- See Constant Editor -> Category: [DEAL - DEV - EBAY 3 ITEMS]

Requirements

- You need your application ID from ebay. See "Requirements" on page 34 below.

Deal! [DEV] ebay categories

Deal! [DEV] ebay categories

Configuring

- You configure the properties supported by TypoScript.
- See Constant Editor -> Category: [DEAL - EBAY DEV - GET CATEGORIES]

Illustration 8: Plugin Deal! ebay categories

Functionality

- These plugin displays categories from the ebay shop.
- It is a quick and easy way to check, if you can use the ebay shop within TYPO3 in principle.
- It is a draft for importing categories by CSV into your TYPO3 database.

Properties

- ebay marketplace (like Germany or US)
- Level limit
- Root category

TypoScript Constant Editor

- You configure the properties supported by TypoScript.
- See Constant Editor -> Category: [DEAL - DEV - EBAY CATEGORIES]

Requirements

- You need your Auth Key from ebay. See "Requirements" on page 34 below.

Form for an Item – [Deal! ebay]

The tab is called [Deal! ebay] by default. You have to save the form for any effect.

Illustration 9: The tab [Deal! ebay] in the flexform of a Quick Shop item

This is the view for administrators.

Please configure the flexform view for editors by configuring a backend user group.

This item on ebay

Property	Description
This item on ebay	Status message with link to your item on the ebay marketplace.

Action

Property	Description
Action	Enable/Update: the item will be enabled or updated Cleanup: the item should be cleaned up (but this isn't possible because of ebay restrictions) Disable: the offer will be disabled
Mode	off: nothing will happen live: action will be executed, you can have ebay fees test: action will be checked only, possible fees are calculated (this isn't possible in some cases)

Item

Property	Description
Ebay item ID	ebay id of your item provided by ebay
Item condition	New New: others (see description) Refurbished by the manufacturer Refurbished by the seller Used For parts or not working
Quantity	If quantity is greater than 1, ebay customers can buy more than one item per offering. See "Shipping > Costs for every other item (incl. VAT)" below.
Category	ebay category. It isn't possible to select a category with subcategories. Categories depend on the selected ebay marketplace (see Extension Manager)

Shipping

Property	Description
Shipping	Shipping service. Shipping services depend on the selected ebay marketplace (see Extension Manager).
Costs for the first item (incl. VAT)	Costs for the shipping service for the first item including VAT.
Costs for every other item (incl. VAT)	Costs for the shipping service for each item from the second item including VAT. See "Item > Quantity" above.
From location	The location of the item / your stock / your company.

Time

Property	Description
Dispatch time (business days)	
Duration of the ebay offer	

Payment methods

Property	Description
Payment methods	Cash on pickup Paypal See description
Payment description	Payment methods are possible like: <ul style="list-style-type: none"> Payment in kind Payment with local currency

Return policy

Property	Description
Return options	Accepted (only). Details are delivered by ebay
Plus individual description	An individual description for the return options.

Log

Property	Description
Log	Log by ebay and TYPO3. You are allowed to remove the whole log.

Interface for Your Extension

Quick Shop

The interface for Quick Shop consists of the following files and parts:

- ext_tables.php
 - Requires ext_tables/tx_quickshop_products/marketplaces/ebay/ext_tables.php
- ext_tables.sql
 - Fields for extending the Quick Shop
 - MM tables needed by Deal! for the Quick Shop
- ext_tables/tx_quickshop_products/marketplaces/ebay/ext_tables.php
 - Contains the TCA configuration (flexform configuration).
 - Quick Shop fields are mapped in the "TCA ctrl" section, which are needed by Deal!
See: "Reference" on page 16 below.
- ext_tables/tx_quickshop_products/marketplaces/ebay/locallang_db.xml
 - Contains the localisation for the backend forms.

Other Shops and databases

You are welcome, to use Deal! for any other shop or database.

Please take the Quick Shop as a draft for an integration of another shop. See "Quick Shop" on page 15 above.

Reference

TCA ctrl

Deal! is an interface. It is ready to use for Quick Shop. And you should use it for every other shop too.

The section TCA ctrl is the connector and mapper of Deal! for Quick Shop and every other shop.

See "Interface for Your Extension" on page 15 above.

ebay – Overview

Property	Data type	Description
ebay	array	<p>Configuration of the Quick Shop items table (tx_quickshop_products). If you like to use Deal! for another shop, please replace tx_quickshop_products with the name of the item table of the other shop.</p> <p>Code:</p> <pre>\$TCA['tx_quickshop_products']['ctrl']['tx_deal'] = array('marketplaces' => array('ebay' => array('environment' => array('key' => \$confArr['ebayEnvironment'], // sandbox, production 'production' => array('token' => \$confArr['ebayProductionToken'] // obligate for // production environment), 'sandbox' => array('token' => \$confArr['ebaySandboxToken'] // obligate for // sandbox environment)), 'fields' => array('description' => array('datasheet' => 'datasheet', // optional (must be a TYPO3 table) 'description' => 'description', // obligate 'short' => 'short', // optional), 'ean' => 'ean', // optional 'filter' => array('category' => 'category', // optional 'dimension' => 'dimension', // optional 'material' => 'material', // optional), 'gross' => 'price', // obligate 'pictures' => 'image', // optional 'sku' => 'sku', // obligate: sku or uid 'title' => 'title', // obligate), 'manufacturer' => array('company' => \$confArr['manufacturerCompany']), 'marketplace' => \$confArr['ebayMarketplace'], 'paypal' => array('production' => array('email' => \$confArr['paypalEmail'] // optional), 'sandbox' => array('email' => \$confArr['paypalEmail'] // optional)),),),);</pre>

ebay.environment

Property	Data type	Description
ebay.environment	array	<p>All environment properties get their values from the extension manager. You have to change nothing but the name of the item table (tx_quickshop_products). Please copy an paste this code into your extension.</p> <p>Code:</p> <pre>\$TCA['tx_quickshop_products']['ctrl']['tx_deal'] = array('marketplaces' => array('ebay' => array('environment' => array('key' => \$confArr['ebayEnvironment'], // sandbox, production 'production' => array('token' => \$confArr['ebayProductionToken'] // obligate for // production environment), 'sandbox' => array('token' => \$confArr['ebaySandboxToken'] // obligate for // sandbox environment), ...), ...),);</pre>

ebay.fields

Property	Data type	Description
ebay.fields	array	<p>This is the field wrapper. Please look for the comments in the code below.</p> <p>ean: European Article Number</p> <p>If you like to use Deal! for another shop, please replace tx_quickshop_products with the name of the item table of the other shop.</p> <p>Code:</p> <pre>\$TCA['tx_quickshop_products']['ctrl']['tx_deal'] = array('marketplaces' => array('ebay' => array(... 'fields' => array('description' => array('datasheet' => 'datasheet', // optional (must be a TYPO3 table) 'description' => 'description', // obligate 'short' => 'short', // optional), 'ean' => 'ean', // optional 'filter' => array('category' => 'category', // optional 'dimension' => 'dimension', // optional 'material' => 'material', // optional), 'gross' => 'price', // obligate 'pictures' => 'image', // optional 'sku' => 'sku', // obligate: sku or uid 'title' => 'title', // obligate), ...),);</pre>

ebay.manufacturer

Property	Data type	Description
ebay.manufacturer	array	<p>The manufacturer property gets the value from the extension manager. You have to change nothing but the name of the item table (tx_quickshop_products). Please copy an paste this code into your extension.</p> <p>Code:</p> <pre>\$TCA['tx_quickshop_products']['ctrl']['tx_deal'] = array('marketplaces' => array('ebay' => array(... 'manufacturer' => array('company' => \$confArr['manufacturerCompany']), ...),),);</pre>

ebay.marketplace

Property	Data type	Description
ebay.marketplace	array	<p>The marketplace property gets the value from the extension manager. You have to change nothing but the name of the item table (tx_quickshop_products). Please copy an paste this code into your extension.</p> <p>Code:</p> <pre>\$TCA['tx_quickshop_products']['ctrl']['tx_deal'] = array('marketplaces' => array('ebay' => array(... 'marketplace' => \$confArr['ebayMarketplace'], ...),),);</pre>

ebay.paypal

Property	Data type	Description
ebay.paypal	array	<p>The paypal properties get their values from the extension manager. You have to change nothing but the name of the item table (tx_quickshop_products). Please copy an paste this code into your extension.</p> <p>Code:</p> <pre>\$TCA['tx_quickshop_products']['ctrl']['tx_deal'] = array('marketplaces' => array('ebay' => array(... 'paypal' => array('production' => array('email' => \$confArr['paypalEmail'] // optional), 'sandbox' => array('email' => \$confArr['paypalEmail'] // optional)), ...),),);</pre>

TCAdefaults

If you like to define default values for ebay properties of an item, please configure the PageTS – the page TypeScript – of the folder with the items.

See the snippet below.

Effect with enabled ebay mode only!

The ebay mode must be enabled und must not be off. If it is off, all default values won't have any effect.

Sample

```
TCAdefaults {
    // Default values for an item
    tx_quickshop_products {
        // ebay category: mattress
        tx_deal_ebaycategoryid = 131588
        // Shipping from location
        tx_deal_ebaylocation = 'Ibbenbüren'
        // ebay mode. If mode is 'off', default values won't have any effect
        tx_deal_ebaymode = test
        // Payment method
        tx_deal_ebaypaymentmethods = PayPal
        // Shipping service: DHL package
        tx_deal_ebayshippingservicecode = 17
        // Shipping costs for the first item: 18,00 EUR
        tx_deal_ebayshippingservicecosts = 18
    }
}
```

Deal! for immobilienscout24 (is24)

Installation

Install this extension.

Extension Manager

You don't need to configure anything.

Page

Add a page "Deal! immo24"

Set page properties:

[Test] Plugin own logo

This plugin should work proper, if your application is certified by immobilienscout 24. If your company logo isn't displayed, please use this plugin in certification mode and certify the application. Please check, if your immobilienscout24 account contains your company logo.

Your company logo

The URL of your logo

Certificate

Used certificate:

The application is registered. This is the list of the user names:

Everything should be proper, if the user name is the user name of the immobilienscout24 account.
If not, please remove the certificate in the TYPO3 backend.
See table typo3_extensions.tx_deal_immo24certificateSandbox

Illustration 16: Deal! plugin immo24 with the frontend result of the type [Test] logo

Certification

Please see Plugin > Type: Certification on page 22 above.

Please run the certification steps for the modes:

- Live
- Sandbox

Tasks / Cron Jobs

Deal! provides two tasks / cron jobs.

- One for testing
- One for export items to immobilienscout24

You enable a task by

- Modul: System > Scheduler
- Edit area: [Information]
Click the adding icon (1) of the task, you want to enable.

You manage the tasks with the TYPO3 scheduler.

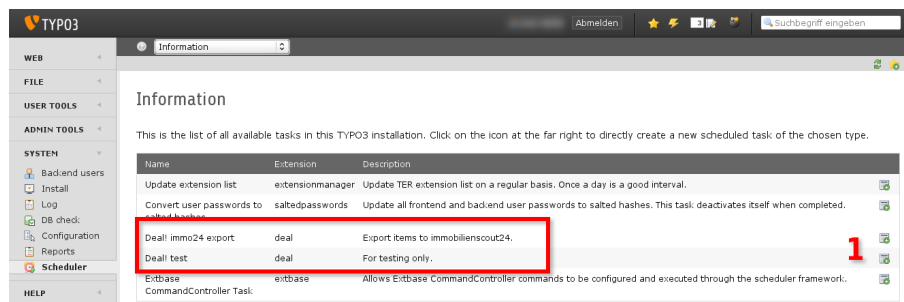

Illustration 17: Deal! tasks / cron jobs

Requirements

If you like to use the task immo24 export, you have to configure the table with your apartments-for-rent and the table with your contacts first. See "Interface for Your Extension" on page 29 below.

Deal! test (deal)

Requirements

There isn't any requirement.

Workflow

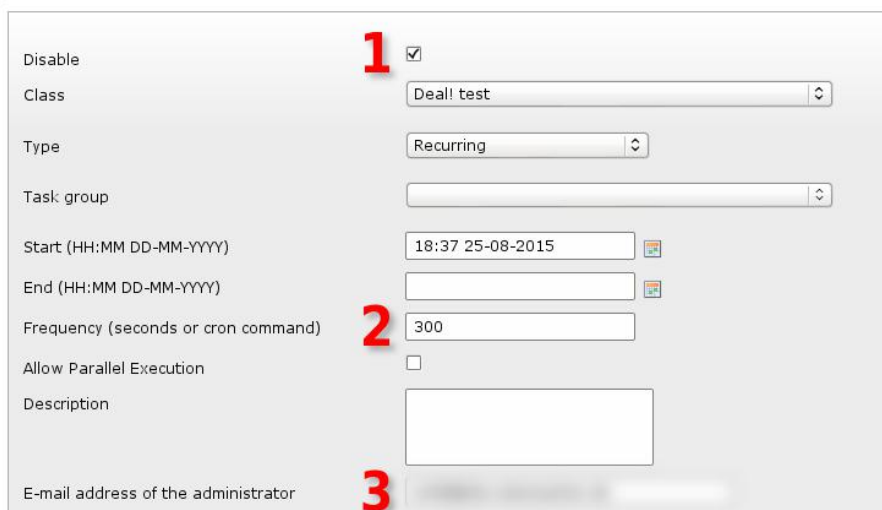

Add the task / cron job (see section above)

Configure the task like in the illustration below:

1. Disable it (it should run manually only)
2. Enter a frequency
3. Enter your e-mail-address

Scheduled tasks

Add task

Disable ☒

Class Deal! test

Type Recurring

Task group

Start (HH:MM DD-MM-YYYY) 18:37 25-08-2015

End (HH:MM DD-MM-YYYY)

Frequency (seconds or cron command) 300

Allow Parallel Execution ☐

Description

E-mail address of the administrator

Illustration 18: Configure the Deal! task Test

Execute the task like in the illustration below:

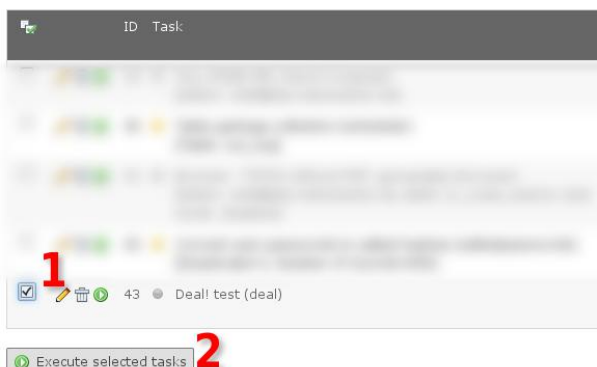

1. Select the task.
2. Klick the button [Execute selected task]
3. You should get some success prompts.

Deal! An e-mail is sent to:

Deal! immo24 export (deal)

Requirements

If you like to use the task immo24 export, you have to configure the table with your apartments-for-rent and the table with your contacts first. See "Interface for Your Extension" on page 29 below.

Workflow

Add the task / cron job (see section above)

Configure the task like in the illustration below:

1. Enter a frequency in seconds. For example: 300 seconds are 5 minutes.
2. Enter your e-mail-address
3. Set the report mode for e-mails
4. Set the mode: Live or Sandbox
5. Enter your keys
6. Enter the table, which contains the apartments for rent¹
7. Enter the table, which contains the fe_users²

Interface for Your Extension

Deal! for immobilienscout24 supports

- apartments for rent and
- contacts

Apartments for rent and contacts must be linked.

Configuration in principle

Deal! provides configuration samples at

- Resources/Private/Marketplaces/Immo24/samples/

Tree view

```

samples
├── fe_users
│   ├── ext_tables.php
│   ├── ext_tables.sql
│   └── locallang_db.xml
└── my_apartmentsforrent
    ├── ext_tables.php
    ├── ext_tables.sql
    ├── locallang_db.xml
    └── tca.php
    
```

Contacts

If you are using another table than fe_users for manage your contacts, please refer to the section fe_users below.

fe_users

Screenshot

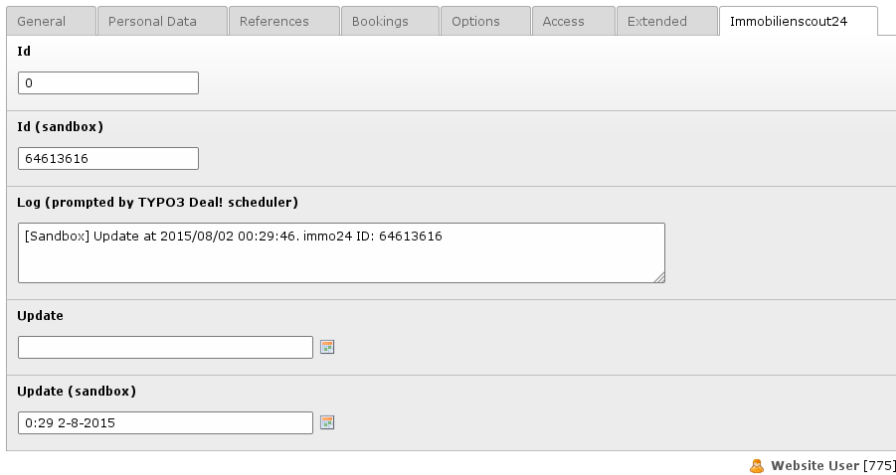

Illustration 22: Deal! extends the fe_user backend form with a div immobilienscout24

You have to extend your contact table with the fields

- immo24id
- immo24idSandbox
- immo24log
- immo24tstamp
- immo24tstampSandbox

This fields are needed to manage the export of your contacts.

Data will displayed in the backend form of a fe_user. See illustration above.

Overview

```
fe_users/
├── ext_tables.php
├── ext_tables.sql
└── locallang_db.xml
```

ext_tables.php

Configures the interface of Deal! for immobilienscout24.

Contains the field mapper for the fields of immobilienscout24 and your contact fields.

Evaluation is defined with patterns for regular expressions.

ext_tables.sql

Add some fields to the database, which are needed by Deal! for immobilienscout24.

locallang_db.xml

Contains labels for the TCA, the backend form.

my_apartmentsforrent

my_apartmentsforrent is a placeholder for the label of your extension table.

Please replace my_apartmentsforrent with the label of your table in the samples and files from below.

Screenshot

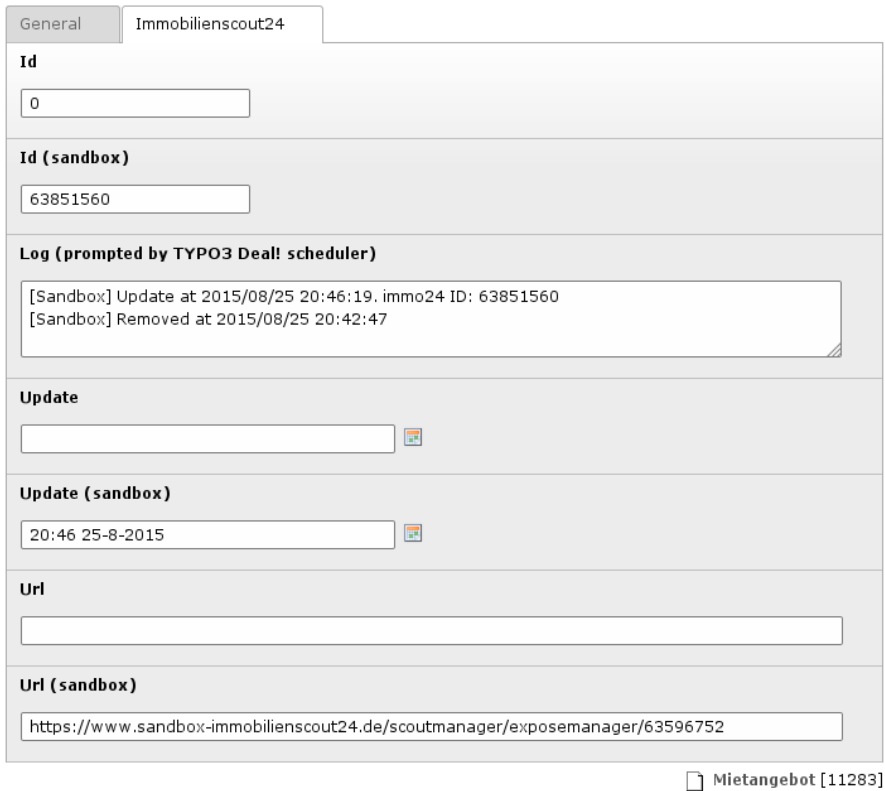

Illustration 23: Deal! extends the apartment-table backend form with a div immobilienscout24

You have to extend your apartments-for-rent-table with the fields

- immo24id
- immo24idSandbox
- immo24log
- immo24tstamp
- immo24tstampSandbox
- immo24url
- immo24urlSandbox

This fields are needed to manage the export of your contacts.

Data will displayed in the backend form of your apartments-for-rent-table. See illustration above.

Overview

```
my_apartmentsforrent/
├── ext_tables.php
├── ext_tables.sql
├── locallang_db.xml
└── tca.php
```

Configures the interface of Deal! for immobilienscout24.

Contains the field mapper for the fields of immobilienscout24 and your contact fields.

Evaluation is defined with patterns for regular expressions.

ext_tables.sql

Add some fields to the database, which are needed by Deal! for immobilienscout24.

[locallang_db.xml](#)

Contains labels for the TCA, the backend form.

[tca.php](#)

Contains the configuration for the backend form – the TCA (Table Configuration Array).

Extension Manager

Configuration of the extension manager has an effect for ebay only. It hasn't any effect for immobilienscout24.

Tabs

Production Token*	OBLIGATED! Your token for the production environment. See your ebay account on https://developer.ebay.com/DevZone/account/default.aspx . See "Generate Token" on https://developer.ebay.com/DevZone/account/tokens/default.aspx . If you don't have a developer account, please register on https://developer.ebay.com/base/membership/signin/
Sandbox Token	Your token for the sandbox environment. It is obligated, if you like to use the sandbox. See your ebay account on https://developer.ebay.com/DevZone/account/default.aspx . See "Generate Token" on https://developer.ebay.com/DevZone/account/tokens/default.aspx . If you don't have a developer account, please register on https://developer.ebay.com/base/membership/signin/
Category Directory	Store ebay categories in the root directory (pid is 0). The root directory is recommended, if you are using one shop for the whole website only. Use [Item directories], if you are using more than one shop. You can use different categories per each shop. But you have to store the ebay categories for each shop manually. See manual below.

paypal

Property	Description
Production e-mail-address	The e-mail-address of your paypal account. It is needed, if you like to enable and update items on ebay. See https://www.paypal.com/
Sandbox e-mail-address	The e-mail-address of your sandbox paypal account. It is needed, if you like to test the enable and the update of your items on ebay without any fees. See https://www.sandbox.paypal.com/

Marketplaces

ebay

Costs¹

BE AWARE: all declarations are without any warranty!

If you are enabling or updating an item on ebay, you can have costs.

You will have further costs for e-payment.

You can eval the costs by Deal!, before you publish an item. Evaluation is without warranty.

Requirements

Accounts

You need the ebay accounts:

- ebay developer program²
- ebay shop³
- ebay sandbox⁴ – for testing Deal! on ebay without any fees

Keys

- <https://developer.ebay.com/DevZone/account/default.aspx>

Token

- <https://developer.ebay.com/DevZone/account/tokens/default.aspx>

Import the values for your marketplace

Supported marketplaces

Deal! provides categories and shipping service costs for each marketplace with an extra extension.

- Germany - EBAY-DE/EUR (77)
 - Deal! ebay values for marketplace Germany/77
 - Import the needed ebay values for the German marketplace! Import is done while enabling this extension.
 - See: http://typo3-deal.de/typo3conf/ext/deal_ebay_000_us/doc/manual.pdf
- US - EBAY-US/USD (0)
 - Deal! ebay values for marketplace US/0
 - Import the needed ebay values for the US marketplace! Import is done while enabling this extension.
 - See: http://typo3-deal.de/typo3conf/ext/deal_ebay_000_us/doc/manual.pdf

Non supported marketplaces

If you like to integrate a non supported marketplace into Deal!, please

- make a copy of the extension deal_ebay_000_us to deal_ebay_xxx_yy
- import the categories and shipping service codes to this extension
- maintain the Deal! files:
 - ext_tables.php
 - ext_tables.sql

¹ Without any warranty!

² <https://developer.ebay.com/base/membership/signin/>

³ <https://signin.ebay.com/>

⁴ <https://sandbox.ebay.com/> Register: <https://developer.ebay.com/DevZone/sandboxuser/>

- locallang_db.xml
- tca.php

You get a list of the needed categories by the Deal! plugin. See: "Deal! [DEV] ebay categories" on page 11 above.

You get a list of the shipping service codes at ebay.

See: <http://developer.ebay.com/DevZone/XML/docs/Reference/ebay/types/ShippingServiceCodeType.html>

If I should integrate the values for the marketplace, please send me an e-mail at <http://wildt.at.die-netzmacher.de/>.
This support isn't without fees.

Development

You can test requests supported by the API Test Tool:

- <https://developer.ebay.com/DevZone/build-test/test-tool/default.aspx>

immobilienscout24 (is24)

Costs¹

Costs are depending on your contract with immobilienscout24.

Requirements

Accounts

You need access to your personal API account. A valid immobilienscout24 account is needed.

- <https://rest.immobilienscout24.de/restapi/security/registration>

Keys

You will get the keys:

- API Key / Consumer Key
- API Secret / Consumer Secret

For Developers

Import-Export API

- Import-Export API
<http://api.immobilienscout24.de/our-apis/import-export.html>

Wiki

- Wiki of the is24 REST-API PHP SDK (German)
<https://github.com/ImmobilienScout24/restapi-php-sdk/wiki>

¹ Without any warranty!

Known Bugs

Error prompts after saving a new item

If you are saving a new item, you will get error prompts.

Reason

TYPO3 is generating the id for the new item while saving the new record and after the data are sent to the ebay interface.

Solution

Save a new item twice.

Immo 24 oauth_token is missing

Deal! has to generate an URL like

```
https://sso.sandbox-immobilienscout24.de/sso/login?...oauth_token%3[the token]
```

while certifying the Immo 24 interface.

But it generates an URL without this token like

```
https://sso.sandbox-immobilienscout24.de/sso/login?...oauth_token%3
```

Reason

Probably your PHP cURL extension isn't running proper.

Solution

Please set in the TypoScript Constant Editor:

DEAL - IMMO24 API – PROPERTIES > reading type: [none]

Item link to ebay is broken in TYPO3 6.2

The link to the item in the ebay shop is broken in the TYPO3 backend.
